

Risk Control

Virtual Capabilities and Digital Solutions

Maximizing flexibility and convenience for policyholders

CNA offers many of our Risk Control services virtually, without an in-person visit. Our innovative resources can help insureds save time and avoid costly claims by identifying and addressing hidden exposures.

PrepWise+™ – This interactive platform serves as a single hub where policyholders, brokers, underwriters and Risk Control professionals can quickly access and share information.

Remote Onsite Risk Assessment – All it takes is an interview and virtual facility tour using selected video conference technology, plus any necessary documents and photos.

SORCE® on Demand – Offering 24/7 access to CNA's library of risk control resources, CNA SORCE® On Demand provides our policyholders and brokers with world-class, online educational solutions that help participants better understand and manage risk.

Self-Reporting Technology – Receive a virtual inspection of your facility simply by sending photos to your Risk Control professional.

PrepWise® Working Remotely – Examine key exposures related to working remotely and reopening, as well as actionable solutions to enable effective work outside the office and help manage your facilities before, during and after a shutdown.

eRiskHub® – Defending against cyber threats requires the right cybercrime mitigation tactics and attack response recommendations. CNA cyber policyholders receive access to eRiskHub®, an online web portal powered by NetDiligence®, loaded with tools and resources to help them understand their exposures, respond effectively and minimize the effects of a breach on their organizations.

For more information, please contact your local CNA Risk Control consultant or visit our website at cnacanada.ca.
