CNA CyberPrep

Providing a Three-Pronged Approach
to Cybersecurity Preparedness

CNA

Cybercrime continues unabated, growing in sophistication, frequency and severity. In fact, cyber risk is one of the top risk concerns of companies globally according to [World Economic Forum Global Risks Report 2021](#). CNA CyberPrep, built on nearly two decades of cyber insurance expertise, is a proactive program of cyber risk services developed by CNA Risk Control and CNA Cyber insurance underwriters in partnership with leading cybersecurity specialists. It is designed to aid CNA cyber policyholders in cyber threat identification, mitigation and response.

About CNA CyberPrep

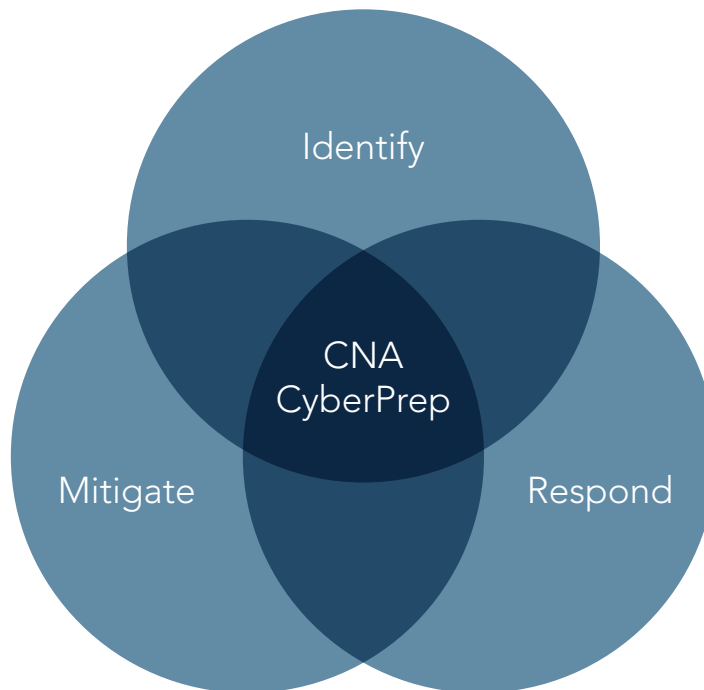

This brochure provides insureds with introductory information regarding these vendors and services. Insureds interested in more detailed information or to determine what services may be appropriate for their business, should contact their broker and CNA cyber underwriter.

Any reports and or recommendations provided by the vendors in the CyberPrep program (other than services provided by CNA Risk Control) will not be shared with CNA unless the insured and their broker choose to do so.

Use of the term "partnership" and/or "partner" should not be construed to represent a legally binding partnership.

CNA CyberPrep

CNA CyberPrep is available to all CNA cyber policyholders, providing them with a network of cybersecurity professionals and services to actively identify, mitigate and respond to their cyber risks. CNA CyberPrep is modeled on industry-leading cybersecurity frameworks for standards, guidelines and best practices, including the National Institute of Standards and Technology (NIST) Cybersecurity Framework, and is rooted in strong partnerships with highly regarded cybersecurity professionals.

Identify

Identify current cybersecurity posture: A select group of vendors and services help insureds identify the strengths and weaknesses of their cybersecurity posture, while also providing recommendations for further cybersecurity steps.

Mitigate

Mitigate potential cybersecurity risk: Cybersecurity recommendations are put into action by additional vendors and services, which help insureds enhance their cybersecurity posture by mitigating potential cyber risk. Services include next generation anti-virus protection, incident response planning and testing, policy and procedure development and testing, password management, employee education and multi-factor authentication.

Respond

Respond to cyber incident: Security incidents are often high-pressure situations. CNA's incident response vendors have a deep understanding of critical steps to minimize an incident's impact and provide help after one occurs. These vendors include breach/privacy counsel, forensic investigation and remediation firms, notification vendors, credit monitoring vendors and public relation firms.

Insureds are encouraged to speak with their broker and CNA cyber underwriter for more details on each service in this brochure.

Identify

Identifying cybersecurity posture is a critical beginning in the CNA CyberPrep process. Services include detailed analyses from a network of cybersecurity experts, reports that provide a snapshot of policyholder security posture and numerous recommendations for improvement. CNA cyber insureds may choose from fee-based preferred pricing services and value-added options, which are included as part of their CNA cyber policy.

Value-Added Services

CNA Risk Control Gap Analysis

The Gap Analysis analyzes information insureds provide about their existing information security programs. CNA offers a customized assessment designed to maximize information confidentiality and minimize vulnerabilities that may lead to a cyberattack.

The CNA Risk Control Gap Analysis:

- Scores the controls against common industry best practices
- Provides an estimated range of breach costs
- Identifies expected impact of loss prevention and mitigation efforts
- Provides recommendations that could potentially lower frequency and/or severity of loss for exposures identified as high impact

CNA Risk Control Information Security and Cyber Infrastructure Self-Assessment

This assessment tool is based on the principles of the National Institute of Standards and Technology (NIST) [Cybersecurity Framework](#) (Identify, Protect, Detect, Respond and Recover) and the [NIST guidelines for Small Business Information Security](#). The results of the assessment help identify security control gap areas and create a baseline to address the potential impact of loss prevention and mitigation efforts.

GamaSec

[GamaSec](#) is a cybersecurity company that lowers the risk and strengthens the resilience of businesses from attacks on their websites and web applications. GamaSec provides a portfolio of services including web vulnerability scanning, daily malware detection, blacklist monitoring and application Firewall (WAF) with DDoS detection. This combination of a proprietary security platform and industry know-how enables GamaSec to deliver industry-leading solutions for website security.

Both existing and new qualifying policyholders in Canada have access to GamaSec. Using cutting-edge virtual hacker technology to identify and eradicate dangerous malware threats and website application vulnerabilities, GamaSec is a pre-breach tool designed to limit the impact of cyberattacks. It is easy to use and does not require coding or installation of additional software.

WhiteHaX – Cloud-Based Penetration Test

[WhiteHaX](#) is a cloud-hosted, automated cyber-readiness penetration testing. The WhiteHaX cyber insurance version provides a quick verification of a business' cyber readiness by simulating a number of the most common threat scenarios against the business' deployed security infrastructure, including network perimeter defenses and endpoint security and controls. The simulated threat scenarios include, but are not limited to:

- Firewall attacks
- User attacks from the internet, such as drive-by downloads
- Email phishing/spoofing/spamming
- Ransomware and data-exfiltration attempts

Detailed results, a summary and recommendations are provided to the insured immediately after the test is concluded.

Insureds can run the program on as many endpoints, and as many times as they wish within the policy period. CNA is notified when an insured [registers for WhiteHax](#). *However, CNA will not receive the WhiteHax report unless the insured chooses to share it.*

To learn more about WhiteHax, please review their [Datasheet](#) and [FAQ](#).

Preferred Pricing Services

External Vulnerability Assessments

An external vulnerability assessment is an outside-in view of a network and/or website that seeks and identifies potential vulnerabilities, and recommends actions to help shore them up. The CNA CyberPrep network includes vendors that can provide insureds with external vulnerability assessments.

Penetration Testing

A penetration test is a simulated attack on your network and applications to determine and attempt to exploit vulnerabilities. At the conclusion of the test, a report will be provided with recommended steps to remediate identified vulnerabilities. The CNA CyberPrep network includes several penetration testing vendors that insureds may use.

Risk Assessments

CNA has established relationships with several vendors that offer risk assessments of varying types that help identify vulnerabilities in a business' cyber/IT environment.

Insureds are encouraged to speak with their broker and CNA cyber underwriter for more details on each service in this brochure.

Mitigate

Working in collaboration with their broker, CNA Risk Control and Cyber Underwriting, policyholders execute recommendations to **mitigate** their cyber risks and improve their cybersecurity posture. Recommendations may include using the following vendors, on either a fee-based preferred pricing service, or via value-added options included as part of their CNA cyber policy.

Value-Added Services

CNA's eRiskHub® Web Portal

CNA offers cyber policyholders access to [eRiskHub®](#), an internet-based service that provides tools and resources to help clients understand the exposures, respond effectively and minimize the effects of breaches on their organizations. From prevention tips to response recommendations, eRiskHub® will assist with any cyber situation.

The eRiskHub® portal provides current cyber risk information and other powerful features, including:

- Incident Roadmap
- News Center
- Learning Center
- Risk Manager Tools
- eRisk Resources

Computer-Based Training Modules

CNA, through its relationship with Cofense, has the ability to provide cyber insureds with more than 20 cyber-related computer-based training modules, covering topics that include social engineering, phishing, breach response and other relevant topics. Please note: Computer based modules require a Learning Management System (LMS). Contact your broker or Cyber Underwriter to learn more about these services and purchasing a LMS at a preferred price if necessary.

CNA-Approved Breach Counsel Consultation

Each member of CNA's pre-approved breach counsel panel has agreed to provide CNA cyber insureds with a free one-hour consultation regarding the breach response process.

Incident Response Planning

Incident response planning is essential to an organization's cybersecurity platform. In fact, the first question a regulator often asks after an incident is reported is whether or not the company had an incident response plan (IRP). CNA has partnered with numerous vendors to provide essential incident response planning at preferred prices.

NetDiligence® Breach Plan Connect

Breach Plan Connect®, powered by NetDiligence®, helps insureds develop an IRP so they can respond efficiently and effectively when a breach event occurs. The software includes a pre-loaded comprehensive and actionable breach response plan. The "Build Your Plan" tool easily adapts the default plan for an insured's organization. The software includes an incident tracking report, incident response checklist and free cyber risk assessment survey.

Key Features

- Mobile-Friendly Platform – Access an IRP at any time, from anywhere, on any device
- Hosted Service – Access an IRP even when an organization's systems are compromised or inoperable
- Scheduled Reminders – Receive reminder emails to review and test an IRP

Preferred Pricing Services

- Free Cyber Risk Assessment Survey – Evaluate and benchmark privacy and security practices

Breach Counsel: Each of CNA's pre-approved breach counsel panel is able to assist an insured with the creation, review, updating or editing of IRPs. Several of these firms have specific IRP services available at a preferred fixed rate for CNA cyber insureds.

Forensic Vendors: In addition to the options above, several of CNA's pre-approved forensic firms provide IRP services at a preferred fixed rate for CNA cyber insureds.

Breach Counsel: Each of CNA's pre-approved breach counsel panel is able to assist an insured with tabletop exercises. Several of these firms have specific tabletop options available at a preferred fixed rate for CNA cyber insureds.

Forensic Vendors: In addition to the options above, all of CNA's pre-approved forensic firms can also provide tabletop options at a preferred fixed rate for CNA cyber insureds.

Policies and Procedures Development and Review

The development of cybersecurity and privacy policies and procedures is essential to an organization's cybersecurity platform. In fact, the second question regulators will ask after inquiring about an IRP is often whether the company has proper cybersecurity and privacy policies/procedures in place. The regulators will also want to review the policies and procedures.

Breach Counsel: Each member of CNA's pre-approved breach counsel panel is able to assist an insured with the creation, review, updating or editing of cybersecurity and privacy policies and procedures. Several of these firms have specific policy and procedure services available at a preferred fixed rate for CNA cyber insureds.

Forensic Vendors: In addition to the options above, several of CNA's pre-approved forensic firms can also review and prepare cybersecurity and privacy policies and procedures at a preferred fixed rate for CNA cyber insureds.

Tabletop Simulations

Once proper IRPs, policies and procedures are developed, it is critical that they are properly tested. CNA CyberPrep vendors are available to run simulations of various breach and attack scenarios to test the efficacy of a business' incident response, disaster recovery and business continuity plans, and also test whether policies and procedures respond properly to real world applications.

There are different kinds of tabletop simulations – some include a law firm, or a forensic firm, while others may include both. Pricing and scope may differ with each option.

Preferred Pricing Services (cont'd)

Security Awareness Training

Human error continues to be one of the top causes of cyber incidents. As a result, educating and training employees is a critical part of a robust cybersecurity platform. CNA has partnered with Cofense to provide security awareness and phishing campaign training to CNA cyber insureds.

Next Generation Anti-Virus Protection

CrowdStrike's Falcon Prevent is a unique array of powerful methods to prevent or protect against the rapidly changing tactics, techniques and procedures (TTPs) used by adversaries to breach organizations – including commodity malware, zero-day malware and even advanced malware-free attacks.

Password Management

Proper password management can help prevent many breaches, and is therefore a key control to have in place. CNA has partnered with Dashlane, a leading password management vendor, to offer a best-in-class password management product at a preferred price to CNA insureds.

Multi-Factor Authentication

Multi-factor authentication (MFA) is a redundant identification process, which requires users to utilize multiple verification steps to gain access to a network or system. The authentication process can entail a combination of passwords, texts, biometrics or other verification methods. The benefit of MFA: The more layers of security cyber criminals need to breach to gain access to a system, the more unlikely they are to try. CNA has partnered with Okta and [WatchGuard](#) to provide differing MFA offerings.

Insureds are encouraged to speak with their broker and CNA cyber underwriter for more details on each service in this brochure.

Respond

CNA CyberPrep continues to benefit policyholders over time. In the event of a cyber breach, CNA's panel of proven **incident response** vendors provide guidance and strategies to help expedite recovery and minimize loss in the event of a breach. Response services include breach counsel, forensic experts, notification and credit monitoring services and public relations.

Breach Counsel: CNA's approved breach counsel can help determine if confidential information was accessed and various provincial or territorial laws were triggered requiring a customer notification as the result of a data breach. Breach counsel can also help in interpreting the various regulations, insured's responsibilities under the law (if any), and assisting in crafting the customer notice letter.

Forensic Experts: CNA's approved forensic experts assist with post-breach investigation and remediation, such as determining the facts around the data breach incident and understanding the extent of the event.

Notification and Credit Monitoring Services: CNA's approved vendors provide insureds' customers with post-breach credit monitoring services.

Public Relations: CNA's approved public relations vendors assist with an insured's post-breach public communications efforts and potential publicity.

Insureds should reference the CNA Breach Incident Support overview or the post-breach tab on the eRiskHub® web portal for more information on these firms and services.

Insureds are encouraged to speak with their broker and CNA cyber underwriter for more details on each service in this brochure.

CNA CyberPrep Network - Cybersecurity Services

CNA CyberPrep is available to all CNA cyber policyholders, providing them with a network of cybersecurity professionals and services to actively identify, mitigate and respond to their cyber risks.

CNA Risk Control Gap Analysis and Information Security and Cyber Infrastructure Self-Assessment Disclaimer

These tools are provided by CNA Risk Control to insureds to use as a reference for organizations seeking to evaluate risk exposures associated with their current Information Security Policies, Procedures and Controls. The content produced is not intended to represent a comprehensive listing of all actions needed to address the subject matter, but rather is a means of initiating internal discussion and self-examination. CNA Risk Control does not implement any security controls nor develop policies or procedures for the Insured. Information Security Policies, Procedures and Controls should be developed by each Insured and tailored to the Insured's individual security profile. These statements do not constitute a risk management directive from CNA. No organization or individual should act upon this information without appropriate professional advice, including advice of legal counsel, given after a thorough examination of the individual situation, encompassing a review of relevant facts, laws and regulations. CNA assumes no responsibility for the consequences of the use or nonuse of this information.

The goal of CNA CyberPrep's Identify stage is to help an insured better understand its Information Security Posture while possibly identifying potential threats and vulnerability areas. Ideally, the answers obtained in the Identify stage will help you prioritize your risk mitigation efforts. Make sure you include key stakeholders in the self-assessment process. The self-assessment should be repeated at least annually and when business conditions change.

About CNA

Together, the CNA insurance companies are among the largest U.S. commercial property and casualty insurance companies. CNA provides a broad range of standard and specialized property and casualty insurance products and services for businesses and professionals in the U.S., Canada and Europe, backed by 120 years of experience and approximately \$45 billion of invested assets.
