

Current Threats in Construction and How CNA Can Help

As construction-related claims become more frequent and expensive than ever before, new trends have emerged in the types and causes of losses. CNA offers tailored coverages to help construction companies mitigate these risks, along with resources to help keep projects and workers safe.

General Liability

TOP 3 CLAIMS

1 Struck by Object

2 Slip/Fall

3 Construction Defect

Emerging Causes

Supply chain issues can result in the use of alternate materials, which in turn can result in defects when applied by workers who lack experience and expertise.

More litigation against construction companies and an increased use of subcontractors who may not have the right insurance coverage can lead to additional liability for the insured.

Auto

TOP 3 CLAIMS

1 Rear-Ended Incident

2 Failure to Yield

3 Backing

Emerging Causes

Inadequate driver selection, amplified by driver shortages and the increased use of distracting electronics, has led to a higher claim frequency and elevated severity trends.

Increased repair costs and a potential lack of supplies may also cause organizations to delay needed vehicle maintenance, which in turn further jeopardizes safe driving and increases the likelihood of a mechanical breakdown.

Workers' Compensation

TOP 3 CLAIMS

1 Manual Material Handling

2 Struck By

3 Slip/Fall

Emerging Causes

Distracted workers, labor shortages, mental and physical fatigue, supply chain issues, social inflation and comorbidities are just a few of the factors impacting workforce resiliency.

Jobs may take longer due to on-site training and supply chain disruptions, leading to sequencing and re-sequencing of work. Combined with an increase in work hours and workers who are less willing to be mobile, this puts a strain on everyday tasks, leading to more claims.
